

FIPS 201 Solutions

A full range of products designed to meet the requirements of FIPS 201

Overview

CoreStreet, along with partners and licensees, offers a complete set of products designed to meet FIPS 201 requirements for a unified credential for both physical and IT access. These technologies include desktop access, physical access, and mobile validation solutions.

Desktop Solutions

- Combined FIPS 201-compliant desktop client and middleware

- Combined FIPS 201-compliant desktop client and hardware (smartcard reader)

- FIPS 201-compliant enrollment process automation platform

- Complete FIPS 201-compliant validation infrastructure. Currently deployed by the DoD and DHS

- RTC Validation Authority
- Desktop Validation Client
- Server Validation Extension
- Responder Appliance

Physical Access Solutions

- Access control devices that use FIPS 201-compliant credentials

- Card-Connected™ solution extends centrally-managed access control cost-effectively to remote locations and assets

Mobile Validation Solutions

- Selected by the Department of Homeland Security
- Covers millions of potential first responders
- Uses federally-mandated standards (FIPS 201, CAC, others)
- Draws data from multiple independent databases
- Automatic logging for audit trail
